PUBLICATIONS

Science Education and Labor Market Outcomes in a Developing Economy (with Tarun Jain, Abhiroop Mukhopadhyay and Nishith Prakash), **Economic Inquiry**, 60(2), 741-763, April 2022

We examine the association between studying science in higher secondary school and labor market earnings in India. Studying science in high school is associated with 22% greater earnings than studying business or humanities. Earnings for science students are further enhanced with some fluency in English. Science education is also associated with more years of education, completing a professional degree, returns to entrepreneurship and working in public sector positions. Primary survey of high school students shows no discernible differences in behavioral characteristics of science students compared to others.
